

User Story: Technical Specification Questions for FI Consultants

Story

As a Senior ABAP Developer on the Syniti Surge team,

I need answers to all technical FI questions listed below

So that I can design and build the historic AP/AR/GL transaction loading product for S/4HANA with confidence, ensuring Clean Core compliance, ACDOCA consistency, and full reconciliation capability.

Context: The feature [RI-871](#) requires loading historic financial transactions into S/4HANA. There is no FI technical specification available. The development team needs FI Consultants to clarify all questions below before architecture decisions (ADRs) and development can begin.

Priority: P0 — Blocking all development

Assignee: FI Consultant Team

Labels: [architecture](#), [fi-specification](#), [blocking](#), [historic-loading](#)

Instructions for FI Consultants

Please answer each question below with:

1. **Answer** — clear, unambiguous response
 2. **Justification** — why (business rule, SAP standard, customer requirement)
 3. **Evidence** — SAP Note, transaction, config path, or documentation reference
 4. **Impact if unanswered** — remains here for context of what blocks development
-

SECTION 1: Scope & Document Types

Q-001: Which FI document types (BLART) are in scope for GL?

Field	Value
Category	Scope Definition
Module	FI-GL
SAP Reference	Table T003 (Document Types), BKPF-BLART
Impact if unanswered	Cannot define extraction filters or validation rules

Detail: In SAP FI, there are 50+ standard document types. Which ones does the product need to support?

- SA (G/L Account Document)?
- SB (G/L Account Posting — with clearing)?
- AB (Accounting Document)?
- Accrual/deferral types (e.g., SA with reversal indicator)?

- Statistical postings?
- Recurring entries (T-code FBS1/F.56)?
- Sample documents?
- Noted items?

Sub-questions:

- Should we filter by document type or load ALL types found in BKPF?
- Are there document types that should be explicitly EXCLUDED (e.g., clearing docs, payment docs)?

Q-002: Which FI document types (BLART) are in scope for AP?

Field	Value
Category	Scope Definition
Module	FI-AP
SAP Reference	T003, BKPF-BLART, account type 'K'
Impact if unanswered	Cannot define AP extraction or posting logic

Detail:

- KR (Vendor Invoice)?
- KG (Vendor Credit Memo)?
- KZ (Vendor Payment)? — If yes: how to handle without bank clearing?
- KA (Vendor Document — general)?
- RE (Invoice — Gross)?
- Down payments (doc types with Special GL indicator UMSKZ = 'A')?
- Vendor bills of exchange?
- Payment notices?

Sub-questions:

- Do we load the PAYMENT documents themselves (KZ) or only invoices/credits?
- If we load payments: how do we recreate the clearing relationship between invoice and payment?

Q-003: Which FI document types (BLART) are in scope for AR?

Field	Value
Category	Scope Definition
Module	FI-AR
SAP Reference	T003, BKPF-BLART, account type 'D'
Impact if unanswered	Cannot define AR extraction or posting logic

Detail:

- DR (Customer Invoice)?
- DG (Customer Credit Memo)?
- DZ (Customer Payment)?
- DA (Customer Document — general)?
- Customer down payments (UMSKZ = 'A')?
- Debit memo (DM)?
- Dunning interest documents?

Q-004: What is the exact T-Code / reporting scope boundary?

Field	Value
Category	Scope Definition
Module	FI (all)
SAP Reference	Various T-Codes
Impact if unanswered	Cannot validate that loaded data is visible in expected reports

Detail: After loading, in which T-codes/reports must the data be visible?

GL scope:

- FAGLL03H (G/L Account Line Items — New)?
- FAGLB03 (G/L Account Balances)?
- S_ALR_87012284 (Financial Statements)?
- FINSC_LEDGER / ACDOCA queries?

AP scope:

- FBL1N (Vendor Line Items)?
- FK10N (Vendor Balances)?
- ME2M (Purchase Orders — related docs)?
- MIRO/MIR5 (Invoice verification history)?

AR scope:

- FBL5N (Customer Line Items)?
- FD10N (Customer Balances)?
- F.27 (Customer balance confirmation)?
- Aging reports (FI-AR standard)?

Cross-module:

- FB03 (Display Document)?
 - BSEG query via SE16N?
 - CDS Views: [I_JournalEntry](#), [I_GLAccountLineItem](#)?
-

Q-005: Is the scope ONLY transactional data, or does it include related objects?

Field	Value
Category	Scope Definition
Module	FI (all)
Impact if unanswered	Scope creep or missing critical dependencies

Detail: RI-871 mentions "transactional data (AP/AR/GL)". Clarify:

- **Parked documents** (VBKPF) — in scope?
- **Held documents** — in scope?
- **Recurring entry documents** (T-code FBD1) — in scope?
- **Accrual/Deferral documents** (FBS1) — in scope?
- **Down payment requests** (F-47/F-37) — in scope? (they are noted items, not real postings)
- **Credit memos with residual items** — in scope?
- **Payment advice notes** — in scope?
- **Correspondence** (dunning letters, payment notices) — in scope?
- **Check management data** (tables PAYR, PCEC) — in scope?
- **Cash management position data** — in scope?

Q-006: What about sub-ledger integration (ML, AA, CO)?

Field	Value
Category	Scope Definition
Module	FI-GL / CO / ML / AA
SAP Reference	ACDOCA fields: KSTAR, PRCTR, SEGMENT, ANLN1, MATNR, BWKEY
Impact if unanswered	Documents loaded without CO/ML/AA data are incomplete in ACDOCA

Detail:

- **Material Ledger (ML):** In S/4HANA, ML postings go to ACDOCA (fields MATNR, BWKEY, MLCATEG). How do we handle historic ML documents? Do they go through our loading or through ML-specific migration?
- **Asset Accounting (AA):** Asset postings create FI documents. Are AA-originated documents in scope? If yes, how to handle ANLN1/ANLN2 references without actual asset master?
- **Controlling (CO):** FI documents carry CO fields (KOSTL, AUFNR, PRCTR, CO_BUSPROC). Must we populate them? What if source doesn't have them?
- **PS (Project System):** FI docs with WBS/Network assignments — in scope?

SECTION 2: Document Creation Strategy

Q-007: Exact replica vs. summarized documents?

Field	Value
Category	Architecture Decision
Module	FI (all)
SAP Reference	BAPI_ACC_DOCUMENT_POST, LTMC
Impact if unanswered	Fundamental design choice blocks all development

Detail: For each module, clarify:

Option A — Exact replica (1:1):

- One SAP doc in target per one doc in source
- Same number of line items
- Same amounts per line
- Preserves full drill-down capability
- High volume, high complexity

Option B — Summarized/Aggregated:

- Multiple source docs → one target doc per period/account/vendor
- Reduces volume dramatically
- Loses individual document drill-down
- May be sufficient for reporting needs

Option C — Hybrid:

- Open items: exact replica (needed for operations)
- Cleared items: summarized (only needed for history/totals)

Per module, which option?

Module	Open Items	Cleared Items	Balances Only?
GL	?	?	?
AP	?	?	?
AR	?	?	?

Q-008: How to post without affecting target system operations?

Field	Value
Category	Architecture Decision
Module	FI (all)
SAP Reference	BAPI_ACC_DOCUMENT_POST parameter EXTENSION2, BAdI BADI_ACC_DOCUMENT

Field	Value
Impact if unanswered	Loading could trigger unintended side effects

Detail: Loading historic documents must NOT:

- Trigger automatic payment runs (F110)
- Trigger dunning runs (F150)
- Affect credit management limits/exposure
- Trigger workflow notifications
- Trigger ALE/IDoc distribution (change pointers)
- Affect bank reconciliation (FEBEP)
- Trigger tax reporting (periodic VAT returns)
- Update CO actuals for current plan versions
- Trigger asset depreciation recalculation
- Affect cash management planning

Questions for FI:

- Which BADs/Substitutions/Validations in the target reject or modify historical postings?
- Can we use a specific **posting key combination** that marks documents as "migration" to bypass operational triggers?
- Is there a migration-specific document type that avoids these side effects?
- Can we use header text pattern (BKTXT) or reference field (XBLNR) to tag migration docs for exclusion from operational processes?

Q-009: Which posting date (BUDAT) and document date (BLDAT) strategy?

Field	Value
Category	Architecture Decision
Module	FI (all)
SAP Reference	BKPF-BUDAT, BKPF-BLDAT, BKPF-CPUDT
Impact if unanswered	Wrong dates cause period assignment errors, balance mismatches

Detail:

- **BUDAT (Posting Date):** Use original posting date from source? Or use migration execution date?
 - If original: periods must be opened retroactively
 - If migration date: all docs land in current period = wrong trial balance per period
- **BLDAT (Document Date):** Preserve original document date from source?
- **CPUDT (Entry Date):** This is system-generated (date of entry). Accept that it will be the migration execution date?
- **AEDAT (Changed on):** Not settable via BAPI — accept loss?
- **Impact on period-end reports:** If BUDAT = original, then monthly trial balances per period are correct. Is this required?

Q-010: How to handle fiscal year variants and special periods?

Field	Value
Category	Configuration
Module	FI-GL
SAP Reference	T009, T009B, OB29 (Fiscal Year Variant)
Impact if unanswered	Posting to wrong period; rejection of docs in special periods

Detail:

- Does the target use calendar year (K4) or non-standard fiscal year variant?
 - Does the source use a DIFFERENT fiscal year variant than the target?
 - If different: how to handle period mapping? (e.g., source period 13 → target period ?)
 - Are there documents in **special periods** (13, 14, 15, 16)? How to handle?
 - Can we post to special periods via BAPI, or do they require manual posting (F-02)?
-

Q-011: Number range strategy — preserve original document numbers?

Field	Value
Category	Architecture Decision
Module	FI (all)
SAP Reference	FBN1, NRIV, BKPF-BELNR, BKPF-XBLNR
Impact if unanswered	Audit trail definition; conflict with existing NR assignments

Detail:

- **Option A:** Preserve original document number (BELNR) from source
 - Requires external number range assignment
 - Risk: conflicts with existing docs in target
 - Requires FBN1 configuration of external intervals
- **Option B:** Let SAP assign new number (internal numbering)
 - Original number preserved in XBLNR (Reference) for audit trail
 - No conflict risk
 - Requires cross-reference table for audit
- **Option C:** Dedicated number range interval for migration
 - Internal, but in a specific range (e.g., 5000000000-5999999999)
 - Easy to identify migration docs later

Which option does the customer/product prefer?

SECTION 3: Open Items vs. Cleared Items

Q-012: What defines an "open item" for AP/AR at cutover?

Field	Value
Category	Scope Definition
Module	FI-AP, FI-AR
SAP Reference	BSIK (AP open), BSID (AR open), BSEG-AUGBL (clearing doc)
Impact if unanswered	Cannot determine extraction logic

Detail:

- Open item = item without clearing document (AUGBL = blank) at what point in time?
 - At source extraction date?
 - At cutover date?
 - At go-live date?
- What about items that are "partially cleared" (residual items)?
- What about items with payment on account (UMSKZ)?
- Does "open" include items in payment block (ZLSPR)?

Q-013: How to recreate clearing relationships for cleared items?

Field	Value
Category	Technical Complexity
Module	FI-AP, FI-AR
SAP Reference	BSEG-AUGBL, BSEG-AUGDT, BSEG-AUGCP, F-44/F-32 (Clearing)
Impact if unanswered	Cleared items display incorrectly; aging reports wrong

Detail: If cleared items are in scope:

- Do we need to recreate the clearing relationship (AUGBL, AUGDT)?
- If yes: the clearing document number in target will be DIFFERENT from source (since it's a new doc) — is that acceptable?
- Can **BAPI_ACC_DOCUMENT_POST** create already-cleared line items? (Answer: NO — it posts as open, then clearing must be done separately)
- Alternative: post invoice + payment as two separate docs, then clear them (F-44 equivalent) — is this acceptable complexity?
- Alternative: use LTMC Migration Object "Open Item — Supplier" which handles this?
- What about partial payments / residual items during clearing?

Q-014: Treatment of down payments (Anzahlungen)

Field	Value
Category	Technical Complexity

Field	Value
Module	FI-AP (F-48), FI-AR (F-37)
SAP Reference	BSEG-UMSKZ (Special GL indicator), T074
Impact if unanswered	Down payments have special posting logic; wrong handling = balance errors

Detail:

- Down payment REQUESTS (noted items, statistisch) — in scope? They don't create real FI docs.
- Down payment PAYMENTS (F-48/F-37) — in scope? They use Special GL accounts (table T074).
- Down payment CLEARING (F-54/F-39) — in scope?
- If we load a down payment: which Special GL indicator (UMSKZ) to use? Must it match source?
- Down payments post to alternative reconciliation accounts (T074T) — must that config exist in target?
- Impact on advance tax reporting (if down payment triggers VAT)?

Q-015: Treatment of Withholding Tax (WHT)

Field	Value
Category	Technical Complexity
Module	FI-AP primarily
SAP Reference	WITH_ITEM table, BSEG-QBSHB/QSFBT, T059Z
Impact if unanswered	WHT-relevant docs rejected or posted incorrectly

Detail:

- Does **BAPI_ACC_DOCUMENT_POST** support WHT fields?
- If source has extended WHT (WITH_ITEM), how do we populate it via BAPI?
- Must WHT be recalculated during loading, or do we pass source amounts directly?
- What about accumulated WHT certificates (annual vendor statements)?
- WHT reporting relevance: if we load historic docs with WHT, will they appear in periodic WHT reports?
Is that desired or problematic (double reporting)?
- Country-specific WHT rules (Brazil: DARF/DIRF, India: TDS/TCS, etc.) — which countries in scope?

SECTION 4: S/4HANA Data Model (ACDOCA / Universal Journal)

Q-016: Which ACDOCA fields are mandatory for a valid document?

Field	Value
Category	Technical Requirement
Module	FI-GL (New GL)
SAP Reference	Table ACDOCA, CDS View I_JournalEntry

Field	Value
Impact if unanswered	Documents stored incompletely; reports return wrong data

Detail: ACDOCA has 400+ fields. Which must be populated for the document to be:

- Visible in FAGLL03H?
- Included in FAGLB03 balances?
- Correct in Financial Statements (S_ALR_87012284)?
- Correct in CDS View **I_JournalEntry**?
- Correct for Document Splitting?

Key fields to clarify source:

ACDOCA Field	Description	Source?
RLDNR	Ledger	Always '0L' for leading?
RRCTY	Record type	'0' for actual?
RBUKRS	Company Code	From source
GJAHR	Fiscal Year	From source
BELNR	Document Number	Assigned or preserved?
DOCLN	Line Item	Derived?
RYEAR	Fiscal Year (redundant?)	Same as GJAHR?
POPER	Posting Period	Derived from BUDAT?
RACCT	Account	Source or mapped?
RCNTR	Cost Center	Mandatory?
PRCTR	Profit Center	Mandatory for splitting?
SEGMENT	Segment	Derived from PC?
RFAREA	Functional Area	Mandatory?
RHCUR/HSL	House Currency Amount	How to derive?
RKCUR/KSL	Group Currency Amount	How to derive?
RWCUR/WSL	Transaction Currency	From source
DRCRK	Debit/Credit indicator	Derived from amount sign?

Q-017: Document Splitting — mandatory characteristics?

Field	Value
Category	Configuration Requirement

Field	Value
Module	FI-GL (New GL)
SAP Reference	FAGL_SPLINFO, FAGL_SPLIT_CUST, OB65
Impact if unanswered	ACDOCA inconsistency; zero-balance rule violated

Detail:

- Is Document Splitting **ACTIVE** in the target system? (Check: FAGL_SPLINFO)
- If active: which characteristics split the document?
 - Profit Center (PRCTR)?
 - Segment (SEGMENT)?
 - Business Area (GSBER)?
 - Functional Area (FKBER)?
- Does the target enforce **zero-balance per splitting characteristic**?
 - If yes: loading a doc without Profit Center on expense line → system auto-generates balancing line → changes document structure from source
- What happens if source documents DON'T have the splitting characteristic populated?
 - Default value?
 - Reject the document?
 - Derive from account master (SKA1-FSTAG → CEPC)?
- Does splitting apply to ALL document types or only specific ones?
- Are there splitting rules based on **business transaction variant** (config in SPRO)?

Q-018: Parallel currencies — which currency types are active?

Field	Value
Category	Configuration Requirement
Module	FI-GL
SAP Reference	T001-WAERS/HWAE2/HWAE3, FINSC_LEDGER, TCURR
Impact if unanswered	Documents stored with wrong/missing currency amounts

Detail:

- How many currencies does the target system maintain?
 - Currency type 10 (Company Code Currency) — always
 - Currency type 30 (Group Currency) — active?
 - Currency type 40 (Hard Currency) — active? (common in Latin America)
 - Currency type 50/60 (Index-based) — active?
- For each active currency type: what is the exchange rate type (KURST)?
- Are historical exchange rates available in TCURR for ALL periods in scope?
- If rates are missing: do we load them first? Or derive amounts differently?
- Does the source system provide amounts in ALL target currencies, or must we CONVERT during loading?

- What about currency rounding differences? Tolerance?

Q-019: Ledger strategy — which ledgers receive the data?

Field	Value
Category	Configuration Requirement
Module	FI-GL
SAP Reference	FINSC_LEDGER (T-code FINSC_LEDGER), ACDOCA-RLDNR
Impact if unanswered	Data loaded to wrong ledger; extension ledgers missing

Detail:

- Leading ledger (0L) — always populated. What about:
 - Extension ledgers (e.g., 2L for IFRS, Z1 for local GAAP)?
 - Non-leading ledgers for parallel accounting?
- If multiple ledgers: must we post to EACH ledger separately?
- Does **BAPI_ACC_DOCUMENT_POST** support multi-ledger posting? (via EXTENSION2 structure BAPI_ACCG_LD_POST?)
- What if source system has ONE accounting standard but target has TWO (e.g., HGB + IFRS)?

SECTION 5: Master Data Dependencies

Q-020: Business Partner — vendor/customer mapping requirement

Field	Value
Category	Prerequisite
Module	FI-AP, FI-AR
SAP Reference	BUT000, CVI_CUST_LINK, CVI_VEND_LINK, BP role
Impact if unanswered	AP/AR postings rejected — BP is mandatory in S/4HANA

Detail: In S/4HANA, there is NO direct vendor/customer. Everything is Business Partner.

- Is Business Partner migration COMPLETE before we start AP/AR loading?
- Where is the mapping table? (CVI_VEND_LINK: vendor→BP, CVI_CUST_LINK: customer→BP)
- What about one-time vendors/customers (CPD accounts, account type C)?
 - How to handle BSEG-LIFNR/KUNNR for one-time with address data?
- What about alternative payers/payees (BSEG-EMPFK)?
- What about intercompany vendors/customers?

Q-021: Chart of Accounts — mapping required?

Field	Value
Category	Prerequisite
Module	FI-GL
SAP Reference	SKA1, SKB1, T001-KTOPL
Impact if unanswered	GL postings rejected due to invalid accounts

Detail:

- Is the target Chart of Accounts (CoA) identical to the source?
- If different (new CoA in S/4): is there a mapping table? Where?
- What about accounts that exist in source but NOT in target (decommissioned accounts)?
 - Reject document? Map to catch-all? Split mapping?
- Group Chart of Accounts (KTOPL in T001): relevant for consolidation?
- Country Chart of Accounts: used?

Q-022: Tax codes — mapping and handling

Field	Value
Category	Prerequisite
Module	FI (all)
SAP Reference	T007A, BSEG-MWSKZ, J_1BTXST3 (Brazil)
Impact if unanswered	Tax code mismatch → posting rejection or wrong tax amounts

Detail:

- Must historic documents carry the ORIGINAL tax code from source?
- If target has different tax codes: mapping required?
- Must tax be RECALCULATED during loading, or load exact amounts from source?
- What about tax condition records (FTXP configuration)?
- Country-specific tax: Brazil (Nota Fiscal integration, ICMS, PIS, COFINS), India (GST), EU (OSS)?
- Historical tax rate changes: if loaded doc has old rate, does the system validate against current rate?

Q-023: Bank accounts and house banks

Field	Value
Category	Prerequisite
Module	FI-AP/AR (payment-related fields)
SAP Reference	T012, BNKA, BSEG-HBKID/HKTID
Impact if unanswered	Payment-related fields rejected or orphaned

Detail:

- If we load payment documents (KZ/DZ): do we need house bank/account ID in the doc?
- Must the house banks exist in target (T012)?
- Partner bank data (vendor/customer bank details) — must exist in BP before loading?
- Payment method fields (BSEG-ZLSCH) — must payment method config exist?

SECTION 6: Specific Scenarios & Edge Cases

Q-024: Intercompany transactions

Field	Value
Category	Technical Complexity
Module	FI (all)
SAP Reference	BSEG-VBUND, BSEG-BVTYP, T042I
Impact if unanswered	Intercompany eliminates will be wrong in consolidation

Detail:

- Intercompany postings generate TWO documents (one per company code). Load both?
- If we load only one side: consolidation elimination will fail.
- Trading Partner field (VBUND) — must be populated?
- What about cross-company code transactions that are in the SAME document (multi-company-code documents via BKPF-BSTAT = 'V')?

Q-025: Foreign currency revaluation documents

Field	Value
Category	Technical Complexity
Module	FI-GL, FI-AP/AR
SAP Reference	FAGL_FC_VAL (T-code), doc type reversal
Impact if unanswered	Loading FC reval docs creates double revaluation

Detail:

- Foreign currency revaluation documents (from F.05/FAGL_FC_VAL) — in scope?
- These are typically reversed at period start. If we load them: do we also load the reversal?
- Risk: if loaded into open period, next revaluation run will create ANOTHER reval → double effect.
- Recommendation needed: EXCLUDE these or INCLUDE with specific handling?

Q-026: GR/IR clearing account handling

Field	Value
Category	Technical Complexity
Module	FI-MM integration
SAP Reference	Account type WRX, F.19 (GR/IR maintenance), MR11
Impact if unanswered	GR/IR balance wrong; MR11 analysis incorrect

Detail:

- GR/IR (Goods Receipt/Invoice Receipt) account documents — in scope?
- These documents are typically created by MM (MIGO/MIRO), not directly by FI.
- If loaded: how to maintain the MM-FI link (BSEG-EBELN, EBELP)?
- Impact on F.19 (GR/IR analysis)?
- Or: GR/IR balance is handled by separate migration strategy?

Q-027: Profit Center / Segment derivation for old documents

Field	Value
Category	Technical Complexity
Module	FI-GL, EC-PCA
SAP Reference	CEPC (Profit Center master), OFI_GL_14 (Segment derivation BRF+)
Impact if unanswered	Document Splitting fails; segment reporting incomplete

Detail:

- Many legacy systems don't have Profit Center on every line item.
- S/4HANA requires Profit Center for Document Splitting (if active).
- Options:
 - Derive from account master (SKB1-PRCTR)?
 - Derive from cost center → profit center assignment?
 - Use a "migration default" profit center?
 - Leave blank and accept splitting won't apply?
- Segment is derived from Profit Center (table CEPC-SEGMENT). If PC is wrong, segment is wrong.
- What about **Functional Area** (FKBER)? Mandatory? Derivation rules?

Q-028: Documents with multiple company codes (cross-company)

Field	Value
Category	Technical Complexity
Module	FI (all)
SAP Reference	BKPF-BSTAT = 'V', BAPI_ACC_DOCUMENT_POST multi-company

Field	Value
Impact if unanswered	Cross-company postings generate 2+ docs; loading only one is incomplete

Detail:

- In SAP, cross-company-code posting creates one LOGICAL document but multiple PHYSICAL documents (one per BUKRS).
- `BAPI_ACC_DOCUMENT_POST` can handle multi-company-code in one call.
- Question: do we load the entire cross-company transaction or each company-code doc independently?
- If independently: the intercompany clearing entries won't balance.
- If together: we need to identify cross-company groups in source data.

Q-029: Noted items and special GL transactions

Field	Value
Category	Technical Complexity
Module	FI-AP/AR
SAP Reference	BSEG-UMSKZ, T074, BSEG-SHKZG in special GL context
Impact if unanswered	Special GL items post to wrong accounts or reject

Detail: Special GL transactions use alternative reconciliation accounts (T074):

- Down payments received/given (UMSKZ = 'A')
- Bills of exchange (UMSKZ = 'W')
- Guarantees (UMSKZ = 'G')
- Securities (various)
- Other customer/vendor-specific special GL

Questions:

- Which Special GL indicators are in scope?
- Must the alternative reconciliation account config (T074) match source?
- Noted items (BSEG-XNEGP or BSTAT = 'S') — are they real postings? How to handle?

Q-030: Automatic payment program documents (F110)

Field	Value
Category	Scope Decision
Module	FI-AP/AR
SAP Reference	REGUH, REGUP, PAYR, doc type ZP/KZ
Impact if unanswered	Loading payment docs without clearing is meaningless

Detail:

- Payment run documents (from F110) contain:
 - Payment document (KZ/DZ)
 - Check/bank transfer details (PAYR, REGUH)
 - Clearing information linking invoice ↔ payment
- If we load the payment doc: we need to also clear the invoice.
- If we DON'T load payment docs: open items remain "open" in target even though they were paid in source.
- Proposed options:
 - A) Load invoice as cleared (status = cleared, AUGBL reference)
 - B) Load invoice + payment + perform clearing
 - C) Only load open items at cutover date; treat everything else as GL summary
- Which approach?

SECTION 7: Material Ledger & Specific Valuation

Q-031: Material Ledger historic data migration

Field	Value
Category	Scope Definition
Module	CO-PC (Material Ledger)
SAP Reference	ACDOCA-MLCATEG, CKMLHD, CKMLCT, MLCD, table MLIT
Impact if unanswered	ML-related FI docs loaded incorrectly; actual costing wrong

Detail:

- In S/4HANA, Material Ledger is MANDATORY (activated by default).
- ML creates FI documents for:
 - Price differences (PRDI)
 - Single/Multi-Level price determination (CKMLCP)
 - Actual cost component split
- Questions:
 - Are ML-generated FI documents in scope of this feature?
 - If yes: how to handle without running actual costing (CKMLCP)?
 - ML documents reference material + plant (MATNR, BWKEY) — must material masters exist?
 - What about the ML closing entries (revaluation of consumption)?
 - Is there a separate ML migration strategy that handles this?
 - In ACDOCA: MLCATEG field — what value for historic docs?

Q-032: Transfer pricing documents (Profit Center Valuation)

Field	Value
Category	Scope Definition

Field	Value
Module	EC-PCA, FI-GL
SAP Reference	ACDOCA-RLDNR (non-leading ledger), ledger L1/2L
Impact if unanswered	Transfer pricing ledger empty or incorrect

Detail:

- If target uses non-leading ledger for transfer pricing or profit center valuation:
 - Must we load data to that ledger?
 - What are the valuation differences (delta entries)?
 - How to derive them from source?

SECTION 8: Technical Integration Points

Q-033: ALE / IDoc / Change Pointer impact

Field	Value
Category	Side Effects
Module	BC-MID (ALE)
SAP Reference	BD50, NAST, change pointers, message types FI_DOC*
Impact if unanswered	Loading triggers thousands of unwanted IDocs to downstream systems

Detail:

- Does posting a FI document trigger change pointers (BD50)?
- If yes: IDocs generated for each loaded doc → floods downstream systems.
- Must we deactivate change pointers before loading?
- Which message types are relevant? (FIDCCP, ACC_DOCUMENT, DEBMAS, CREMAS?)
- What about output types (NAST) triggered by invoice posting?

Q-034: Workflow and notification triggers

Field	Value
Category	Side Effects
Module	BC-BMT-WFM (Workflow)
SAP Reference	SWE2 (Event linkage), BTE (Business Transaction Events)
Impact if unanswered	Thousands of workflow items created for migration docs

Detail:

- Are there workflows triggered by FI document creation? (e.g., invoice approval workflows)

- Business Transaction Events (BTE via FIBF): any active that could interfere?
- Must we deactivate WF event linkages (SWE2) during loading?

Q-035: Bank Communication Management (BCM) impact

Field	Value
Category	Side Effects
Module	FI-BL (Bank Ledger)
SAP Reference	FESEP (Bank Statement items), FF_5 (Cash Management)
Impact if unanswered	Loading payment docs affects bank reconciliation

Detail:

- If we load payment documents: do they create entries in bank ledger (FESEP)?
- If yes: bank reconciliation will show phantom items.
- Impact on cash management position (FF_5)?
- Must bank-relevant documents be excluded from loading?

Q-036: Real-Time Integration to S/4HANA Cloud

Field	Value
Category	Technical Constraint
Module	Platform
SAP Reference	SAP S/4HANA Cloud deployment model restrictions
Impact if unanswered	Product may not work on Cloud editions

Detail:

- Is the product designed for on-premise / private cloud only?
- What about S/4HANA Public Cloud (3-system landscape)?
 - Public Cloud has NO access to SE16, no custom tables (unless RAP-based key user extensibility)
 - Public Cloud migration uses SAP Migration Cockpit ONLY
 - Custom BAPIs are not allowed
- What about RISE with SAP (private cloud managed)?
- Does this affect our Clean Core compliance claim?

SECTION 9: Reconciliation & Validation

Q-037: What constitutes a "successful reconciliation"?

Field	Value
Category	Acceptance Criteria
Module	FI (all)
SAP Reference	FAGLB03, FBL1N/FBL5N, trial balance
Impact if unanswered	Cannot define pass/fail criteria for DoD

Detail: Define precisely for each level:

Document level:

- Debit = Credit per document? (always, by accounting rule)
- Line item count source = target?
- Amounts per line match?

Account level (period):

- GL account balance per period: source = target?
- Tolerance: zero? Or ± 0.01 for rounding?

Subledger level:

- Σ vendor open items (BSIK) = GL reconciliation account (FAGLB03 for AKONT)?
- Σ customer open items (BSID) = GL reconciliation account?

Cross-module:

- GL total = AP reconciliation account + AR reconciliation account + other accounts?
- Trial balance source (full) vs trial balance target (loaded)?

Audit sampling:

- Random sample of N documents: verify source→target field-by-field?
- What N is acceptable? (10? 100? statistical sample?)

Q-038: How to handle reconciliation differences from excluded items?

Field	Value
Category	Reconciliation Logic
Module	FI (all)
Impact if unanswered	False-positive discrepancies in reconciliation report

Detail: If certain doc types are EXCLUDED from scope (e.g., payment docs, FC reval):

- The trial balance will NOT match 100% by design.
- How to account for excluded items in reconciliation?

- Do we need a "reconciliation adjustment" calculation: **Target balance = Source balance - Excluded items?**
- Who defines and signs off on the exclusion list?

SECTION 10: Operational & Cutover Questions

Q-039: Period opening/closing procedure

Field	Value
Category	Operational
Module	FI-GL
SAP Reference	OB52, T001B (period control), BRGRU
Impact if unanswered	Posting rejected due to closed periods

Detail:

- Must ALL historical periods be opened simultaneously?
- Or can we open/load/close period by period (sequential)?
- Security concern: opening old periods in production allows any user to post retroactively.
 - Can we restrict via authorization group (BRGRU)?
 - Can we restrict to the technical migration user only?
- What about fiscal year close carryforward (T-code FAGL_FC_CARRY_FORWARD)?
 - If we load data in a year that's already carried forward: does it break?

Q-040: Parallel execution / concurrency

Field	Value
Category	Performance
Module	FI (all)
SAP Reference	SM50, SM66, RFC destinations, dialog vs background WP
Impact if unanswered	Cannot estimate load time or cutover window feasibility

Detail:

- Can multiple documents be posted in parallel? (Answer: YES, if no lock conflicts)
- What lock objects are held during **BAPI_ACC_DOCUMENT_POST**?
 - ENQUEUE on BKPF (company code + fiscal year)?
 - ENQUEUE on number range?
 - Lock on vendor/customer master?
- If posting GL + AP + AR simultaneously: any lock conflicts?
- Maximum parallelism recommended? (4? 8? 16 processes?)
- Background vs dialog: which is appropriate?

- RFC server groups: relevant?

Q-041: Cutover sequence — what must happen BEFORE loading?

Field	Value
Category	Operational
Module	FI (all)
Impact if unanswered	Loading fails due to missing prerequisites

Detail: Confirm the following must be completed BEFORE historic loading:

- ☐ CoA migration (all GL accounts exist in target)
- ☐ Profit Center hierarchy (CEPC)
- ☐ Cost Center hierarchy (CSKS)
- ☐ Business Partner migration (all vendors/customers)
- ☐ Bank master data (BNKA, T012)
- ☐ Tax code configuration (T007A)
- ☐ Document type configuration (T003)
- ☐ Number range setup (FBN1)
- ☐ Fiscal year variant configuration (T009)
- ☐ Exchange rates loaded (TCURR) for all periods
- ☐ Document Splitting configuration (if active)
- ☐ Period open for loading (OB52)
- ☐ Authorization role for migration user

Anything else?

Q-042: What happens AFTER loading? (Post-processing)

Field	Value
Category	Operational
Module	FI (all)
Impact if unanswered	Loaded data not fully integrated

Detail: After historic data is loaded, which post-processing steps are needed?

- Close opened periods (OB52)?
- Run balance carryforward (FAGL_FC_CARRY_FORWARD)?
- Recalculate totals (transaction FAGL_RESET_TOTALS / F.5E)?
- Update credit management exposure (FCV1)?
- Update dunning levels for AR (if loaded without dunning data)?
- Rebuild indexes / statistics (DB-level)?
- Activate change pointers again (if deactivated)?
- Remove migration user / lock?

SECTION 11: Clean Core & Compliance

Q-043: Which APIs are C1-Released (stable contract) for this use case?

Field	Value
Category	Clean Core
Module	FI (all)
SAP Reference	SAP API Business Hub, ADT Released Objects
Impact if unanswered	Using non-released APIs violates Clean Core

Detail: Confirm released status for:

Object	Type	Released?
BAPI_ACC_DOCUMENT_POST	BAPI (FM)	?
BAPI_ACC_DOCUMENT_CHECK	BAPI (FM)	?
BAPI_ACC_DOCUMENT_REV_POST	BAPI (FM)	?
I_JournalEntry	CDS View	?
I_GLAccountLineItem	CDS View	?
I_SupplierLineItem	CDS View	?
I_CustomerLineItem	CDS View	?
CL_BAL_LOG	Class	?
IF_BADI_ACC_DOCUMENT	BAdI Interface	?

- If **BAPI_ACC_DOCUMENT_POST** is NOT released in target release: what is the alternative?
- Is there a RAP-based API for FI document posting in newer releases?
- What about **FINSC_POST_API** (new Clean Core posting API)?

Q-044: ATC scan requirements for delivered code

Field	Value
Category	Clean Core
Module	Development
SAP Reference	ATC (ABAP Test Cockpit), variant ABAP_CLOUD_READINESS
Impact if unanswered	Code rejected by customer governance

Detail:

- Must all delivered Z-code pass ATC with variant **ABAP_CLOUD_READINESS**?
- What about code that uses BAPIs (which are released but call classic modules internally)?
- Custom tables (ZSURGE_*): allowed under Tier 1? Or must use RAP-managed tables?
- Application Log (SLG0/SLG1): is **CL_BAL_LOG** released in Tier 1?

SECTION 12: Risk & Edge Cases

Q-045: What if a document in source has no equivalent posting logic in S/4?

Field	Value
Category	Risk
Module	FI (all)
Impact if unanswered	Unknown number of documents cannot be loaded

Detail: Examples of potentially unloadable docs:

- Documents posted via obsolete transactions (FB70/FB75 replaced by new experience)
- Documents with deprecated account types
- Documents using posting keys eliminated in S/4 (e.g., modified posting keys)
- Documents referencing objects that don't exist in S/4 (e.g., classic GL account in SAP R/3)
- ECC New GL vs. Classic GL differences (T8G39)
- What is the fallback strategy? Reject? Adapt? Transform?

Q-046: Reversal documents — how to handle?

Field	Value
Category	Technical Complexity
Module	FI (all)
SAP Reference	BKPF-STBLG (Reversal Doc), FB08, BAPI_ACC_DOCUMENT_REV_POST
Impact if unanswered	Double postings or missing reversals

Detail:

- If source has Document A + its Reversal B:
 - Option 1: Load BOTH A and B → net zero, preserves audit trail
 - Option 2: Load NEITHER (they cancel out) → reduces volume
 - Option 3: Load only the net effect
- What about partial reversals?
- What about documents reversed in a different fiscal year?
- Reversal reason code (BKPF-STGRD) — must be provided?

Q-047: Tolerance limits and credit limits during loading

Field	Value
Category	Side Effects
Module	FI-AP/AR
SAP Reference	OBA4 (tolerances), OBJ1 (AR credit), FD32 (credit limit)
Impact if unanswered	Postings rejected due to tolerance/credit checks

Detail:

- Posting tolerance limits (OBA4): do they apply during BAPI posting? Can they reject historic docs?
- Payment difference tolerances: relevant for loading?
- Credit limit (FD32): does posting an AR invoice increase credit exposure?
 - If yes: loading 5 years of AR invoices instantly exceeds all credit limits
 - How to bypass?
- Payment terms validation: if ZTERM from source doesn't exist in target → rejection?

Q-048: Archiving impact

Field	Value
Category	Operational
Module	BC-ARC
SAP Reference	AOBJ (archiving objects), FI_DOCUMNT, residence time
Impact if unanswered	Loaded data immediately eligible for archiving

Detail:

- If we load documents from 2015-2020 into target in 2026:
 - The residence time for archiving might already be exceeded
 - Risk: next archiving run archives the just-loaded data
- How to set residence time for loaded documents?
- Should loaded docs have a different archiving attribute?
- Or: configure archiving object FI_DOCUMNT to exclude migration range?

SECTION 13: Country-Specific Requirements

Q-049: Country-specific fields and legal requirements

Field	Value
Category	Scope Definition
Module	FI (localization)
SAP Reference	Various (J_1B*, J_1A*, J_1I*, etc.)

Field	Value
Impact if unanswered	Missing legal fields in specific countries

Detail: Which countries will use this product? Each may have specific requirements:

Country	Specific Concern
Brazil	Nota Fiscal reference (J_1BNFLIN), CFOP, tax split (PIS/COFINS/ICMS), SPED ECF/ECD reporting
India	GST fields (J_1IG*), HSN code, TDS/TCS (Withholding Tax)
Mexico	UUID (CFDI), SAT catalog codes
Argentina	Perception/Withholding tax (J_1A*), CUIT
USA/Canada	1099 reporting (QSSH, BSEG-J_1KFTIND)
EU	VAT registration, Intrastat (BSEG-MWSKZ + country)
China	Golden Tax integration, Fapiao

- Must we support ALL country-specific fields?
- Or: define supported countries for v1?
- What about multi-country customers (loading AP from 20 company codes in different countries)?

Q-050: Electronic invoicing compliance

Field	Value
Category	Legal Compliance
Module	FI (localization)
Impact if unanswered	Loaded docs may trigger e-invoice submission

Detail:

- In countries with electronic invoicing (Brazil NF-e, Mexico CFDI, India e-Invoice):
 - Does posting a historical document trigger an e-invoice submission?
 - How to prevent this?
 - Must we populate the external document reference (UUID/chave de acesso)?

Summary Statistics

Category	Questions
Scope & Document Types	Q-001 to Q-006
Document Creation Strategy	Q-007 to Q-011

Category	Questions
Open Items vs. Cleared Items	Q-012 to Q-015
S/4HANA Data Model (ACDOCA)	Q-016 to Q-019
Master Data Dependencies	Q-020 to Q-023
Specific Scenarios & Edge Cases	Q-024 to Q-030
Material Ledger & Valuation	Q-031 to Q-032
Technical Integration Points	Q-033 to Q-036
Reconciliation & Validation	Q-037 to Q-038
Operational & Cutover	Q-039 to Q-042
Clean Core & Compliance	Q-043 to Q-044
Risk & Edge Cases	Q-045 to Q-048
Country-Specific Requirements	Q-049 to Q-050
TOTAL	50 Questions
